

Accelerometer

Vibration & Environmental Monitoring | Product brochure

Accelerometer

Wireless triaxial accelerometer for structural vibration monitoring and modal analysis.

Key benefits

- Triaxial acceleration sensing
- Wireless battery-powered operation
- Programmable sampling rate from 40 to 640 Hz

Engineering highlights

Dynamic vibration monitoring: Records acceleration events for structural health analysis.

Event-triggered capture: Detects threshold breaches automatically.

High resolution: Suitable for modal and vibration studies.

Typical applications

- Machinery monitoring
- Modal analysis
- Seismic vibration tracking

Technical specifications

Specification	Value
---------------	-------

Axes	3-axis
Sampling rate	40–640 Hz
Communication	LoRaWAN
