

Bi-Reflex Target

Survey Targets & Markers | Product brochure

Bi-Reflex Target

High-accuracy target for remote displacement monitoring with three-dimensional survey reference.

Key benefits

- Precision target for remote distance measurement
- Suitable for structural displacement surveys
- Designed for reliable long-range detection

Engineering highlights

3D movement monitoring: Used with survey instruments for displacement tracking.

Precision reference: High accuracy detection from remote distance.

Robust construction: Built for field installation on structures.

Typical applications

- Survey displacement monitoring
- Structural movement measurement
- Remote reference targets

Technical specifications

Specification	Value
---------------	-------

Target type	Bi-reflex
Use	Three-dimensional surveying
Safety	Stable reference installation
