

Building Settlement Marker

Survey Targets & Markers | Product brochure

Building Settlement Marker

Settlement point marker for observing ground movement under buildings and fill areas.

Key benefits

- Precision-machined spherical head
- Steel rod reference for settlement monitoring
- Used in embankments and filled ground

Engineering highlights

Settlement reference point: Tracks vertical ground movement accurately.

Precision head: Stable spherical surface for survey instruments.

Field-ready: Suitable for construction and fill monitoring.

Typical applications

- Building settlement
- Embankment monitoring
- Ground movement observation

Technical specifications

Specification	Value
---------------	-------

Rod diameter	12 mm
Material	Steel
Use	Settlement point
