

Center Hole Load Cell

Strain & Load Monitoring | Product brochure

Center Hole Type Load Cell

Center-hole load cell for axial force measurement through anchor rods and tiebacks.

Key benefits

- Center hole design for rod installation
- Monitors anchor and tieback loading
- High safety margin for structural use

Engineering highlights

Rod-through load measurement: Captures axial force directly in anchor rods.

Construction-ready: Used in tieback and rock anchor systems.

Durable design: Works in harsh geotechnical settings.

Typical applications

- Tieback monitoring
- Anchored structure stability
- Load verification

Technical specifications

Specification	Value
---------------	-------

Cell type	Center-hole load cell
Capacity	Varies by model
Protection	Weatherproof
