

Ground Settlement Marker

Survey Targets & Markers | Product brochure

Ground Settlement Marker

Settlement monitoring point for embankments and compacted fill with precise vertical movement tracking.

Key benefits

- Records vertical ground movement
- Installed in embankments and filled areas
- Designed for progressive construction monitoring

Engineering highlights

Ground movement observation: Helps assess performance of fill and embankment materials.

Vertical reference: Stable marker for repeated survey readings.

Construction-friendly: Used throughout build cycles.

Typical applications

- Embankment monitoring
- Ground fill settlement
- Construction phase tracking

Technical specifications

Specification	Value
---------------	-------

Use	Ground settlement monitoring
Marker type	Vertical reference point
Installation	Embedded marker rod
