

In-Placement Extensometer

Displacement & Settlement Monitoring | Product brochure

In-Placement VW Extensometer

In-place extensometer for precise measurement of subsurface displacement over long distances.

Key benefits

- Customized length up to 4 meters
- Gauge length tuned to site conditions
- Rod body and cable connection for reliable readout

Engineering highlights

Long-distance measurement: Captures subsurface movement over custom lengths.

Robust rod design: Designed for permanent or semi-permanent installations.

Accurate displacement data: Used in foundations and excavations.

Typical applications

- Subsurface displacement
- Excavation monitoring
- Foundation movement tracking

Technical specifications

Specification	Value
---------------	-------

Length	Up to 4 m
Gauge length	Custom 1,000 mm
Installation	In-place extensometer
