

Magnetic Extensometer

Survey Targets & Markers | Product brochure

Magnetic Extensometer

Magnetic probe extensometer for settlement and heave monitoring in soil and rock applications.

Key benefits

- Magnetic probe with graduated tape
- Monitors settlement and heave over time
- Suited for excavations, foundations and tunnels

Engineering highlights

Settlement tracking: Measures vertical movement in soil and rock.

Magnetic probe system: Easy access and readout using tape and reel.

Versatile use: Applies to foundations, embankments and excavations.

Typical applications

- Soil heave monitoring
- Foundation settlement
- Tunnel excavation

Technical specifications

Specification	Value
---------------	-------

Probe type	Magnetic
Measurement	Settlement / heave
Installation	Probe with reel tape
