

Mechanical Rod Settlement Meter

Displacement & Settlement Monitoring | Product brochure

Mechanical Type Rod Settlement Meter

Rod settlement meter for measuring ground or foundation settlement under load.

Key benefits

- Tracks settlement through anchor and rod movement
- Used for consolidation and stability assessment
- Clear mechanical dial readout

Engineering highlights

Settlement monitoring: Detects settlement of ground and foundations under load.

Mechanical simplicity: Dial gauge system for direct reading.

Robust design: Built for durable site measurement.

Typical applications

- Ground settlement observation
- Foundation displacement
- Dam monitoring

Technical specifications

Specification	Value
---------------	-------

Display	Dial gauge
Application	Settlement measurement
Construction	Field ruggedized
