Strain & Load Monitoring | Product brochure

VW Type Piezometer

General pore pressure meter for monitoring groundwater and liquid pressure in soil and embankments.

Key benefits

- Measures liquid and pore pressure
- Used for soft ground and embankment foundations
- High-accuracy NTC thermistor compensation

Engineering highlights

Precise pressure readings: Tracks pore water changes in foundations and embankments.

Robust construction: Designed for long-term ground monitoring.

Temperature compensation: Maintains accuracy under changing conditions.

Typical applications

- Groundwater monitoring
- Embankment stability
- Foundation pressure analysis

Technical specifications

Specification	Value
---------------	-------

Measurement	Pore water pressure
Sensor	NTC thermistor compensated
Installation	Borehole and embankment
