

Shotcrete Stress Meter

Strain & Load Monitoring | Product brochure

VW Type Shotcrete Stress Meter

Stress meter installed before shotcrete placement to measure compression in tunnel linings.

Key benefits

- Monitors shotcrete stress during construction
- Measures tangential and radial directions
- Supports tunnel safety verification

Engineering highlights

Pre-shotcrete installation: Captures stresses before final lining is applied.

Multi-directional sensing: Reads stress in tunnel and shotcrete layers.

Construction safety: Useful for early warning and quality control.

Typical applications

- Tunnel lining monitoring
- Shotcrete quality control
- Structural safety checks

Technical specifications

Specification	Value
---------------	-------

Measurement	Stress in shotcrete
Placement	Before lining application
Durability	Designed for construction exposure
