

Slope Indicator

Tilt & Inclinator Systems | Product brochure

Digital Tilt Meter

Slope indicator for monitoring surface and shallow movement on slopes and structures.

Key benefits

- Designed for slope and structural movement
- Robust monitoring components
- Clear measurement output

Engineering highlights

Slope-specific design: Ideal for retaining walls and slope face monitoring.

Stable reference output: Provides reliable movement data over time.

Easy deployment: Simple setup in the field.

Typical applications

- Slope stability
- Retaining wall monitoring
- Embankment tracking

Technical specifications

Specification	Value
---------------	-------

Sensor type	Dual-axis inclinometer
Output	Digital readout
Mounting	Surface installation
